DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: --A METHOD FOR MANUFACTURING MICROPHONE ASSEMBLIES--.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "forming each of the divisions into a same shape and a same size" as recited in lines 11-12 of claim 3 renders vague and indefinite. It is unclear as to what the each of the divisions is indicated. Is it each of the plurality of divisions of connector aggregation or microphone aggregation or gasket aggregation into a same shape and a same size? Or, all of the plurality of divisions of connector, microphone and gasket aggregations into a same shape and a same size?

Allowable Subject Matter

4. Claims 3 and 4 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

5. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to disclose the claimed invention. The closest reference, Elder et al. teach a process of manufacturing a composite structure comprising steps of laminating a first layer (4, equivalent with a connector aggregation), a second layer (1, equivalent with a microphone aggregation) and a third layer (2, equivalent with a gasket aggregation) having a plurality of holes to form a composite structure as shown in Fig. 2A. However, Elder et al. fail to teach that the first layer as the connector aggregation does not provide a plurality of divisions and the second layer as the microphone aggregation does not provide a microphone at each of a plurality of divisions and the third layer as the gasket aggregation does not have a sound collecting hole at each of a plurality of divisions. In addition, Elder et al. fail to teach processes of stacking the layers and cutting the lamination to separate a microphone assembly. It is not obvious taken alone or in combination of other references fairly to suggest the claimed invention.
